Subject: HHO Generator Adjustments

Hi Gavan

I hope all is well.

Have my system installed and running in my diesel hilux now. I'm seeing results of round 20% fuel efficiency improvement at the moment but trying to tune things better using HHO volume, CTS,IAT and MAF. To improve on this value.

Do you have standard EFIE starting adjustments that you apply to common rail diesel engines. I.E reduce MAF reading by 20%, increase IAT 10% etc.

Regards
Paul
